Introducing...

RIE, Mini BTE and Traditional Custom Products *New models to fit more patients*

ReSound Alera offers a full complement of hearing aid models, each offering unique benefits. Alera fits 98% of all hearing losses and provides the kind of accurate, personalized fittings that are fundamental to good hearing and excellent sound. Alera also addresses a wide range of personal preferences and gives every client a comfortable, easy-to-handle solution.

NEW! WindGuard™ *Incredibly clean signal*

WindGuard™ is a unique wind-noise algorithm that takes advantage of inputs from dual microphones to provide patients with effective wind noise reduction. WindGuard™ seamlessly transitions from one environment to the next to maximize comfort and prevent sudden volume changes as the patient moves in and out of windy conditions. All of this is done without compromising speech intelligibility.

NEW! In-situ Audiometry *More convenient than ever*

In-situ audiometry is a convenient addition to ReSound Alera's already robust capabilities. With ReSound Alera, you can obtain an audiogram using the convenient in-situ audiometry using the patient's own Alera BTE or RIE. In-situ audiograms are completely interchangeable with conventional ones.
